MCI™ (Multi-Cluster Ionization)

**FULLY CUSTOMIZABLE!**

The basic residential unit (16K) can be customized to the load level of the environment and converted to a more powerful residential or commercial unit with the addition of DBI cells.

### Air Purification Systems

### A Groundbreaking Solution!

**Rigorously tested and proven safe by industry standards.** At the heart of our commitment to healthier living is our revolutionary MCI™ technology, a groundbreaking solution that earned the prestigious HM Innovative Award at the 2014 International ASHRAE Convention.

This accolade recognizes the unique characteristics and unparalleled effectiveness of our technology in neutralizing or destroying airborne and surface contaminants. **Our MCI™ technology ensures cleaner air and surfaces in every indoor setting.**

**USING MCI™**

**CLEANING TECHNOLOGY**

# IS YOUR HOME OR OFFICE MAKING YOU SICK?

# PURE AIR

## MOLD REMOVAL

### MACOMB

POWERED BY **PURE MAINTENANCE**

Let us make it **Healthy** again.

# DEMOLITION FREE MOLD REMEDIATION

*Your Mold Issues resolved in 1 day*

# Why Choose **Demolition Free Mold Removal**?

## More Effective

Fill up the entire space with a **sterilant that removes mold, virus, bacteria & germs from surfaces and denatures spores that are airborne, in furniture, fabrics, in the air ducts and behind walls.**

## More Affordable

**Faster and without the unnecessary costs of replacing walls, carpet and furniture.** Pure Air provides **free evaluations and estimates.**

## Faster

With dry fog technology **the entire process can be taken care of in about four to six hours from start to finish.**

## Less Invasive

Instead of quarantining a section of your house or office off and having contractors walking in and out for weeks, **Pure Air will simply back their truck up, bring a few small nozzles in the building and 4-6 hours later your home or office will be free of any harmful mold or pathogens.**

# Our 2-step Process for **Mold & Microbe Removal**

## 1st Step: InstaPURE

We utilize a hospital grade cold sterilant called peracetic acid (PAA). PAA is formed by combining hydrogen peroxide and acetic acid. It is a **powerful antimicrobial sterilant that destroys molds, bacteria, and viruses by means of oxidation.** Moreover, PAA readily degrades into water, carbon dioxide, and oxygen (**leaving behind no toxic residues**). Through the dry fogging process, PAA vapors will **get into every nook and cranny of your home (including the HVAC ductwork)**. As a result, pathogens in your home or workplace will not simply be covered up or moved around — they will be effectively destroyed. **In just a few hours, a home will be sterilized and made safe again.**

## 2nd Step: EverPURE

EverPURE is the second step in the Pure Maintenance remediation process. It utilizes a product registered with the EPA for household use that **provides a biostatic, antimicrobial barrier on all of the surfaces of your home in order to help prevent future mold growth.** This technology allows Pure Air Macomb to provide a warranty on services that is unique in the industry. Visit our website for details.

## The Results: Improvements in Air Quality

Using “before” and “after” air samples, personnel at the U.S. Army Engineer Research and Development Center were able to **document significant improvements in indoor air quality in two test buildings at Fort Campbell, Kentucky. Visit our website for the full report.**

Tested & Approved by

US Army Corps of Engineers®

\*\*Both InstaPURE and EverPURE are EPA Registered in all 50 States.

# You may have **Mold...**

## DO you...

- Smell something musty
- Have itchy eyes or skin
- Can't stop coughing or sneezing
- Feel better when you leave the building
- See evidence of water damage
